

Spearman ρ (mean $\pm$ std, 12 trials)

(a) PoR-Model is robust to small N
($\varepsilon_\beta = 0.8$, ESS $\approx 1.5\%$)

Spearman ρ (mean $\pm$ std, 12 trials)

(b) PoR-Model converges quickly
($N = 300$, $\varepsilon_\beta = 0.8$; plateau at ≈ 50 iters)
